

WELCOME TO JULIAN NATURAL WONDERFEST

JESS MARTIN PARK, AUGUST 11, 2018 FROM 3-11 PM

FREE SHUTTLE FROM LIBRARY AND TOWN HALL

MEET OUR NASA AMBASSADOR JERRY HILBURN!

Jerry is one of those people whom you may only encounter once, but you never forget, especially if you have a penchant for astronomy, science or space exploration. Jerry has spent a good part of his life organizing star parties, tracking asteroids, and doing public speaking about planetary probes such as the Curiosity Mars rover and the New Horizons Pluto Probe, on behalf of NASA. Those of you who attended his talk on the Juno Jupiter probe in 2017 at the Julian library know how passionately Jerry communicates science. He's probably on

his biggest roll when he's got a group of young kids, eyes wide open, at the telescope on a clear dark night.

Jerry left for the Sacramento area about a year ago. He continues to put on star parties and track asteroids, especially the ones that cross our earthly path now and then. Fortunately for us, Jerry loves Julian and will be back here on **August 11 to kick off the shooting star party at Julian Natural Wonderfest**. Be ready to laugh and learn. Jerry has a reputation for keeping his audience laughing while we digest large portions of some very deep science!

Visit us on Facebook (Julian Natural Wonderfest) and on-line at <http://naturalwonderfest.com>
